Restoration

Martin A. Benassi, AIA - Architect LLC, as part of our on-call roofing consultant contract with the University of Connecticut, was retained to prepare Contract Documents for the replacement of the existing IRMA roofing system within the 6-foot wide continuous perimeter built-in gutter.

The decision was made to use a fully reinforced, fluid-applied, (PMMA) methyl-methacrylate liquid resin waterproofing membrane system.

The flexibility of the system permitted flashing of the building's irregular shape and contours in a seamless application.

Scope of Work included:

- Gutter repair
- Re-lining of gutter
- Lightning protection
